## P R E F A C E .

---

IN drawing up the present Catalogue, of incomparably the finest collection of Shells in Ireland, I have endeavoured to lay before the public, in a tabular form, first, the name by which each species is known to the scientific of the present day; next, the name by which it was known to Linné, or his followers; thirdly, the English name, or that by which it is known, for the most part, to the dealers; and lastly, the country which the shell inhabits.

In so extensive a collection, it of course happened that some of the species had never before occurred to me—those I have noticed in the Appendix, where also I have inscribed some notices from the New Edition of *Lamarck Animaux Sans Vertèbres*, concerning the rarity of some of the little-known shells in the collection. I have not thought it necessary to dwell on those shells which have been rendered famous by their scarcity—such, for instance, as the far-famed *Conus cedo-nulli*—the no-less valuable Orange Cowry, Scorpion Murex, *Voluta fulgitrum*, Glassy Nautilus, Wentle traps, &c.—nor the host of others to be found here, whose names are familiar to every one from the extravagant prices they have brought in the market.

F. M'C.

Modern Name	Old Name	English Name	Locality
<b>CONIA</b>			
20 porosa	porosa	porous	Kurile Islands
<b>BALANUS</b>			
21 porcatus	porcata	ridged	East Indies
22 Scoticus	Scoticus	Scotch	Antrim
23-27 fistulosus	clavata	club shaped	Dublin Bay
28 rugosus	rugosa	rugged	Devonshire
29 striatus	striatus	striated	Holland
30 radiatus	radiatus	purple rayed	Unknown
31-39 tintinabulum	tintinabulum	bell	Jamaica
<b>PENTELASMIS</b>			
40 striatus	anserifera	striated	Dublin Bay
41 krevis	anatifera	duck	Howth
<b>ASPERGILLUM</b>	<b>SERPULA</b>	<b>WORM SHELL</b>	
42 agglutinans	agglutinans	carrier	Unknown
<b>SEPTARIA</b>	<b>TEREDO</b>	<b>BORER</b>	
43 arenaria	gigantea	great bifurcated	Island of Ceram
<b>TEREDO</b>			
44 navalis	navalis	ship	Bottom of ships
<b>PHOLAS</b>	<b>PHOLAS</b>	<b>PIERCER</b>	
45 dactyloides	dactylus	prickley	Antrim
46 costata	costata	ribbed	East Indies
47-48 candida	candida	white	Malahide
49-51 crispata	crispata	curled	Malahide
52 parvus	parvus	little	England
53-54 pusillus	pusillus (in wood)	dwarf	Mediterranean

Modern Name	Old Name	English Name	Locality
PHOLIDEA			
55 papyracea	papyracea	paper	England
SOLEN	SOLEN	RAZOR	
56-57 siliqua	siliqua	pod	Dublin Bay
58-59 vagina	vagina	sheath	Dublin Bay
60-61 truncata	truncata	truncated	American Seas
62-63 pelucidus	pelucidus	pelucid	Dublin Bay
ENSATELLA			
64-66 europœa	ensis	sword	Dublin Bay
SOLENOCURTUS			
67 legumen	legumen	peaseod	Dublin Bay
68 caribœus	caribœus	caribbean	Antilles
69-70 strigilatus	strigilatus	strigilated	Sicily
71-74 radiatus	radiatus	purple-rayed	Java
SOLETELLINA			
75 rostrata	diphos	violet	Indian Ocean
MYA	MYA	GAPER	
76 truncata	truncata	abrupt	Malahide

## NOTES.

---

97. A species of *Maetra*, resembling the *M. gigantea*, but thinner more depressed and more elongated transversely.

98. Resembling the last, but rather more prominent at the beaks, probably the young, or a mere variety of *M. gigantea*.

144. A *Tellina*, apparently confounded with the *T. sulphurea*; but the beak is greatly shorter, the ligament is larger and the transverse striæ deeper and sharper; the colour is the same in both.

179—186. From 179 to 181, a very much rounded *Tellina* of white colour, ligament very large, inflexion of the beak small transverse striæ irregular, fine length and breadth about 3 inches.—182. A minutely decussated shell, with longitudinal and transverse striæ, colour white, yellowish at the beak; ligament moderate; pit very large, smooth; length and breadth about 1 inch. It has a truncated appearance.—183. A very thin slightly-beaked *Tellen* of a pale-flesh colour, distinctly rayed with white.

252—258. From 252 to 254 is a species nearly allied to *C. morphina*, differing principally in the colouring, the longitudinal rays being absent; and being slightly more compressed. 256, 257, differ from *C. morphina* only in being rather paler. 257 and 258, resemble *C. castanea*, but are of a pale-yellow colour.

275. Differs from *C. chione* in being slightly thicker, and having the epidermis dull.

294. One species of *Cytheria*.

309. A very old and rugose specimen of *C. flexuosa*.

373—380. Six species of *Venus*, the two first resembling *V. scripta*, but greatly larger, coarser, and with stronger transverse striæ. 375. A very globose thin shell, much worn, and the characters obscure. 376. A pretty species between *V. papilionacea*, and *V. paphia* in appearance. 379. Resembles *V. caliste*, but the ribs are very thick and smooth. 380. A slightly compressed *V. caliste*.

381, 383. Coquille rare et précieuse, surtout lorsqu'on possède les deux valves du même individu. *Lamarck. Anim. Sans. Vert. vol. VI. p. 4.*

457, 458. Two species of *Cardita*.

472, 475. Coquille singulière précieuse, recherchée dans les collections.

490. One valve of a singularly thick *Area*, resembling *A. granosa*.

508. Not in Lamarck's cabinet.

563. *Cleidotherius*?

573. Distinguished from the other species of *Tridacna* by the long hollow spines on the ribs, and the peculiar truncation of the anterior side.

586. This *Hippopus* greatly resembles a *Tridacna squamosa* deprived of its scales, having but five ribs, and five intermediate striæ, its margin is semicircular and not triangular as in the other species, nor has it a strong prominence in the middle as in the *H. maculata*; its form, in fact, is precisely that of a much worn *T. squamosa*, but at the same time possessing the true characters of the genus *Hippopus*.

607—609. Three small indistinct species of *Modiola*.

649. A species of *Perna*, resembling *P. isognomon*, but large, and having the lobe very small, as in the *P. ephippium*; the hinge resembles the latter shell.

650. Coquille extrêmement rare, recherchée, très précieuse. *Lam. Anim. S. V. vol. VI. p. 144.*

656, 657. A species of *Avicula* of a green colour, with white articulated rays.

710, 711. The two shells bearing these numbers, are probably the same species, they greatly resemble the *P. varius*, but the ribs are flattened, there is one small rib in the interstices, and the striæ on the surface are transverse instead of longitudinal.

720. A greatly worn valve, with longitudinal striæ, and seven ribs, species doubtful.

731. Coquille très-rare, très-recherchée dans les collections. *Lam. Anim. S. V. vol. VI. p. 190.*

768, 769. Two small undescribed species of *Hyalæa*, from the Nile.

777, 778. Two *Chitons*, the first a large whitish species, with the lateral triangles tuberculated, the margin sealy variegated with green and white. The other is a very beautiful species, the valves are minutely tuberculated, of a chestnut colour, variegated with white; a large white keel in the centre of each, and the margin of the valves bright blue; the margin is naked coriaceous yellow.

801. *Patella* measuring nearly eight inches in length.

839—855. *Patellæ*, the species of which have not been ascertained.

866, 867. Two species of *Fissurella*, the first very large, but obscured by parasites; the second small and worn, species doubtful.

879—881. Two species of *Calyptrea*, one white inside, with long tubular spines; the other, dark chestnut within, and having extremely small spines.

- 948, 966. Nine species of *Helix*, some of them rare.
- 988—992. Four species of *Helix*, large.
- 995—997. Two species of *Zonites*.
- 1008—1010. A carinated, dark brown *Helix*.
1030. A shell so rare that it is quoted by Lamarck as only existing in the cabinet of Mr. M. M. Valenciennes and Salé.
- 1050—1061. Seven species of *Bulimus*, some of them excessively rare.
1082. Coquille très-rare, précieuse. *Lam. Anim. S. V. vol. VI. p. 129.*
- 1141. Coquille rare, recherchée et précieuse, surtout lorsqu'elle est bien conservée. *Lam. Anim. S. V. vol. VI. p. 159.*
- 1089—1091. Three species of *Achatina*.
1145. One *Melania*.
- 1154—1156. Two species of *Ampullaria*, the last number green, with an orange lip.
- 1217, 1218. One species, of *Nerita*, large worn.
- 1222, 1223. Large patulous *Natica umbilicus*, dark red, divided by a sulcus.
- 1247—1255. One species of *Natica*, white, with longitudinal brown stripes.
- 1271, 1273. Très-belle coquille, précieuse et fort recherchée dans les collections. *Lam. Anim. S. V. vol. V. p. 214.*
- 1274, 1275. A large white species of *Haliotis*. (rubbed.)
1299. One small obscure species of *Haliotis*.
- 1347—1354. A *Trochus*, differing from the *T. Niloticus* only in the base being very slightly dilated.
- 1360, 1361. A *Trochus*, resembling *T. incermis*, but of great size.
- 1362, 1363. Coquille grande, rare, précieuse, et fort remarquable. *Lam. Anim. S. V. vol. VII. p. 10.*
- 1471—1475. Three species of *Monodonta*, differing in the disposition of the white markings.
- 1478—1481. Two species of *Monodonta*, the first white with broad transverse red blotches, the last greenish grey with zig-zag black lines, an articulated black and white band at the sutures.
1530. One large *Turbo* with the lines of growth scaly.
- 1555—1557. A large brown mottled species of *Turritella*.
- 1604, 1605 Two species of *Pleurotoma*, the first with brown spiral ridges; the other having the whorls carinate, and transverse brown stripes.
1660. A species of *Fusus* resembling the *F. rigidus*, but with the beak as long as the spire.
- 1745, 1746. The first number is the young of *M. crassispina*, in all probability; the last differs, in having but two tubercles between each varix.

1793—1799. Two species of *Murex*, the first resembling *M. brasica*, but having a transverse row of tubercles between the varices; the last two numbers differ in their yellow mouth.

1897—1914. Varieties of *Pterocera chiragra*, (age, colour, monstrosities, &c.)

1985—1987. Differs from the *Strombus succinctus* only in having a keel round the body whorl.

2074—2085. Two species of *Purpura*, the first having two rows of tubercles on the body whorl, and the lips yellow—the other, different varieties of the *P. persica*.

2237—2238. A species of *Terebra*, resembling the *T. acieulina* in shape, but of a white colour, with bluish markings at the sutures.

2360—2362. A species of *Voluta*, closely resembling the "orange flag." *V. vexillum*, but is larger, and has many of the transverse red bands connected by longitudinal red cloudings.

2572. A cowry, differing from the *C. olivacea*, in being shorter, the margin thicker, and having a square brown spot on the back.

2814—2819. Four species of *Oliva*, the first resembling *O. utriculus*, but is banded and reticulated with dark brown; the next is probably a variety of the *O. textilinea*. The two next specimens differ from the *O. scripta* chiefly in size, while the last species, resembles *O. undata* in markings, but is much more slender.
